

STAY ON SCHEDULE. STAY COMPLIANT.

SAMPLE MANAGER

Simplify water quality compliance with one powerful, easy-to-use tool.

Missed or late samples cause 75% of U.S. drinking water violations. That's not from lack of effort, but from managing changing requirements, scattered spreadsheets, and tools that can't keep up. Sample Manager takes that burden off your plate by keeping monitoring requirements, schedules, tasks, and results organized and up to date in one place, automatically syncing with regulatory databases so nothing slips through the cracks. That clarity brings confidence, knowing every sample is accounted for and every deadline is met.

When technology takes care of the tracking, operators can take care of the water.

Why Utilities Choose Sample Manager

NEVER MISS A REQUIREMENT:

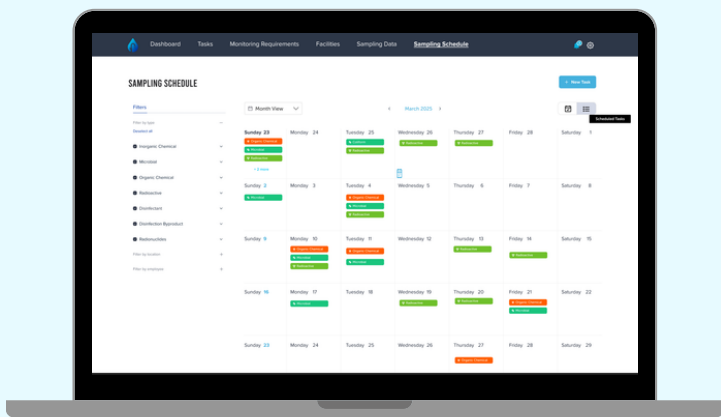

Automatic updates from regulatory databases keep schedules accurate.

BE READY FOR ANY AUDIT:

Full documentation for every requirement and every action.

KNOW YOUR STATUS AT A GLANCE:

Dashboards, tasks, maps, and timelines show exactly what's due, done, or overdue.

From Collection to Compliance. All in One Place.

- **Save Time:** Automate repetitive scheduling and reporting tasks.
- **Reduce Risk:** Minimize missed samples and late submissions.
- **Simplify Reporting:** Meet state deadlines with export-ready formats.
- **Scale With Ease:** Works for one system or multi-jurisdiction programs.
- **Improve Coordination:** Assign tasks, balance workloads, and keep teams aligned.

How It Works

Creates and assigns tasks in bulk to keep teams moving

Provides map, calendar, and timeline views for full visibility

Generates exports for compliant state reporting

Syncs daily with regulatory databases and connected labs

Centralizes monitoring requirements, tasks, and results

Built for Utilities of Every Size

From rural systems serving a thousand people to large private systems with thousands of samples a year, Sample Manager is designed to fit your workflow **without overcomplicating it.**
