

120Water™

YOUR CONNECTED PLATFORM FOR COMPLIANCE

Every Arizona water system uses 120Water to manage their LCRI inventory and stay on track through 2027.

THE BRIDGE BETWEEN UTILITY AND STATE

Arizona built its LCRI program on the 120Water platform. Your inventory, customer notices, and submissions all flow through the same platform ADEQ uses to review and approve them.

The Lead and Copper Rule Improvements build on the complexities of the Lead and Copper Rule Revisions, creating uncharted waters for utilities to navigate.

Trusted by states and recommended by the National Rural Water Association, 120Water is the best software for utilities to tackle this complex compliance journey.

Visit <https://pws.120wateraudit.com/> to access the platform.

IN JUST ONE PLATFORM, YOU CAN:

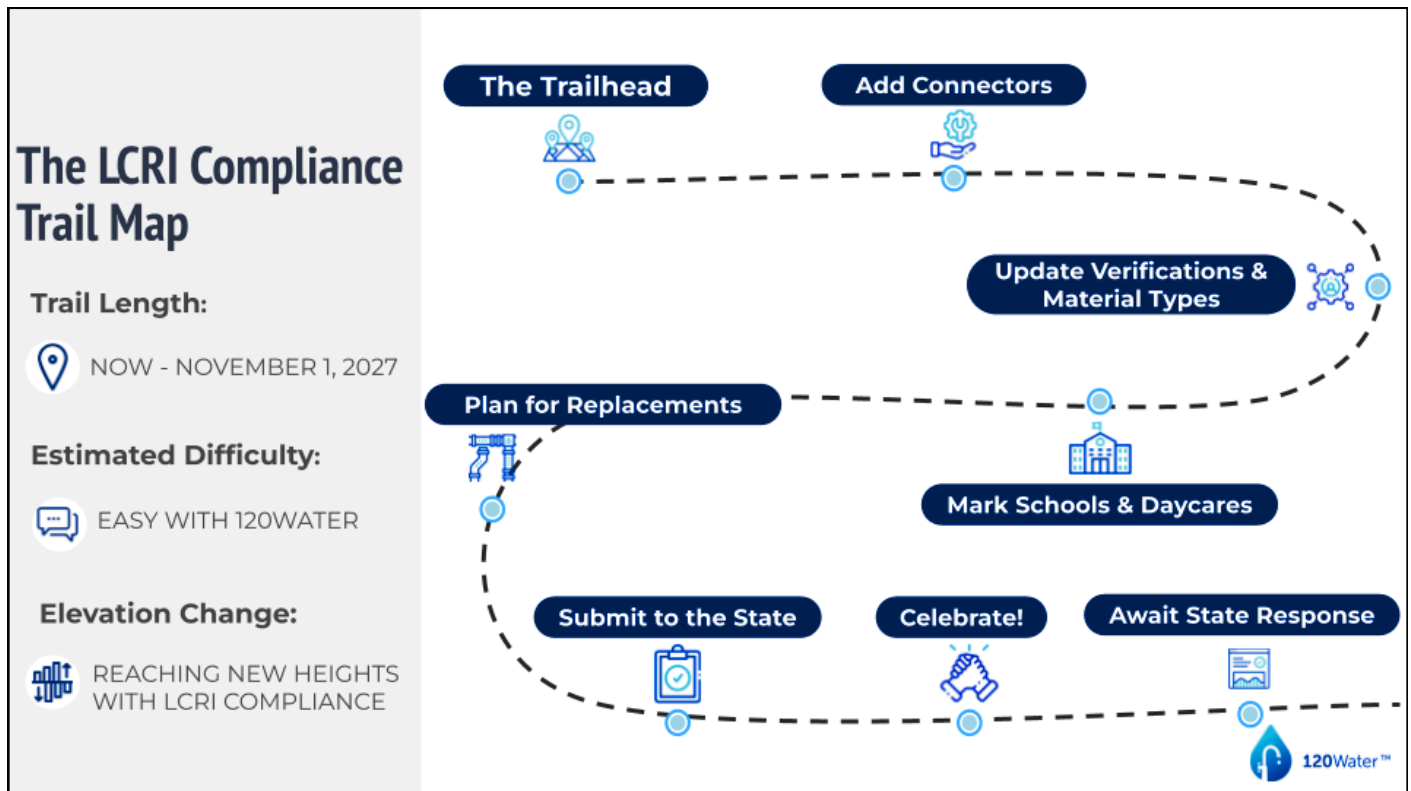

- ✓ Upload data relating to locations, contacts, and all the pieces of service lines into a centralized database.
- ✓ Update your preliminary inventory with material classifications, connectors, verification and/or replacement information to prepare for submission.
- ✓ Submit your updated inventory and customer notice certification directly to ADEQ.

120Water is the tool required by ADEQ to update your service line inventory. Scan the QR code to access free training information and additional resources.

KEEP UP YOUR COMPLIANCE MOMENTUM

All Community Water Systems and Non-Transient Non-Community Water Systems in Arizona are required to submit their LCRI baseline inventory to ADEQ through the 120Water platform by November 1, 2027. Now is the time to start making updates! Follow the trail map to success.

Your PWS account with 120Water contains built-in data validation and quality assurance checks to ensure that your submission meets the requirements of LCRI. The Support Team at 120Water is there to help along the way. If you have questions, check out our online Help Center below, attend our upcoming trainings, or email support@120water.com.

If you have additional needs, talk to our team about what solutions may work best for you. 120Water is on a mission to empower water professionals with software and services to meet regulatory requirements, improve operational efficiency, and provide safe and transparent water quality to our communities.
